

Life Safety in Business Occupancies Code Updates

The Joint Commission has created a new Standard section specifically for business occupancies in the Life Safety Chapter that will be released on July 1, 2021. Here are four things you should know:

1

Create life safety drawings of all business occupancy spaces.

2

Conduct business occupancy preconstruction risk and life safety assessments. Implement your ILSM Policy when needed.

3

Document inspections and inventory of your equipment in these spaces including fire extinguishers, exit lights, and battery operated egress lighting.

4

Develop a process for maintaining fire and smoke walls and annual rated door inspections.
